

# Valve Guards

Plastic Guard - Fitted  
to a CO<sub>2</sub> beverage cylinder

Valve guards come in many shapes, sizes and materials. They are fitted to cylinders primarily to protect the valve from damage. Secondary uses may include: carrying handle, printed information and owner identification.

For small and lighter cylinders plastic is generally used, for larger and heavy cylinders steel manufactured guards are fitted to meet the demands of legislation.

All guards are made to meet tough international design standards.

Steel Guard, usually painted

Galvanised Steel Guard

Steel Dome Cap - various designs

Specialist Plastic Moulded
